### **Version Date**

9 August 2005

# Template Tags/get day link

## ***Description***

Returns the daily archive [URL](#) to a specific year, month and day for use in [PHP](#). It does NOT display the URL. If year, month and day parameters are set to ' ', the tag returns the URL for the current day's archive.

## ***Usage***

```
<?php get_day_link('year', 'month', 'day'); ?>
```

## ***Examples***

### **Current Day as Link**

Returns the URL to the current day's archive as a link by displaying it within an anchor tag with the PHP echo command.

```
<a href="<?php echo get_day_link(' ', ' ', ' '); ?>">Today's posts</a>
```

### **Use With Variables**

PHP code block for use within [The Loop](#): Assigns year, month and day of a post to the variables \$arc\_year, \$arc\_month and \$arc\_day. These are used with the get\_day\_link() tag, which returns the URL as a link to the daily archive for that post, displaying it within an anchor tag with the PHP echo command. See [Formatting Date and Time](#) for info on format strings used in [get\\_the\\_time\(\)](#) tag.

```
<?php
$arc_year = get_the_time('Y');
$arc_month = get_the_time('m');
$arc_day = get_the_time('d');
?>
<a href="<?php echo get_day_link("$arc_year", "$arc_month",
"$arc_day"); ?>">this day's posts</a>
```

## ***Parameters***

year

(*integer*) The year for the archive. Use ' ' to assign current year.

month

(*integer*) The month for archive. Use ' ' to assign current month.

day

(*integer*) The day for archive. Use ' ' to assign current day.
