Version Date

9 August 2005

Template Tags/get year link

Description

Returns the yearly archive [URL](#) to a specific year for use in [PHP](#). It does NOT display the URL. If year is set to ' ', the tag returns the URL for the current year's archive.

Usage

```
<?php get_year_link('year'); ?>
```

Examples

Year as Link

Returns the URL for the current year's archive, displaying it as a link in the anchor tag by using the PHP echo command.

```
<a href="<?php echo get_year_link(''); ?>">Posts from this year</a>
```

Using \$year03 Variable

Returns URL for the archive year 2003, assigning it to the variable \$year03. The variable can then be used elsewhere in a page.

```
<?php $year03 = get_year_link(2003); ?>
```

Using With PHP Variables

PHP code block for use within [The Loop](#): Assigns year to the variable \$arc_year. This is used with the get_year_link() tag, which returns the URL as a link to the yearly archive for a post, displaying it within an anchor tag with the PHP echo command. See [Formatting Date and Time](#) for info on format strings used in [get_the_time\(\)](#) tag.

```
<?php
$arc_year = get_the_time('Y');
?>
<a href="<?php echo get_year_link($arc_year); ?>"><?php the_time('Y') ?>
archive</a>
```

Parameters

year

(*integer*) The year for the archive. Use ' ' to assign current year.
