9 August 2005

Template Tags/print UrlPopNav

Description

Displays a dropdown menu, of which each option is a link opening in a new browser window the mentioned geodata-related site. If the tag is called from within [The_Loop](#), the Latitude and Longitude entered for a post are queried at each site. When called outside The Loop (or inside The Loop, but no Lat/Lon was entered for a post), default Latitude and Longitude for the weblog are queried.

Link options in the dropdown menu are:

- Acme Mapper
- GeoURLs near here
- GeoCaches near here
- MapQuest map of this spot
- SideBit URL map of this spot
- Confluence.org near here
- Topozone near here
- FindU near here
- Maptech near here

Usage

```
<?php print_UrlPopNav(); ?>
```

Example

```
<div>Choose Geo site: <?php print_UrlPopNav(); ?></div>
```

Parameters

This tag has no parameters.
