Template Tags/wp link pages

Description

Displays page-links for paginated posts (i.e. includes the `<!--nextpage-->` [Quicktag](#) one or more times). This works in much the same way as [link_pages\(\)](#), the difference being that arguments are given in query string format. This tag must be within [The_Loop](#).

Usage

```
<?php wp_link_pages('arguments'); ?>
```

Examples

Default Usage

Displays page-links by default with paragraph tags before and after, using *Next page* and *Previous page*, listing them with page numbers as *Page 1*, *Page 2* and so on.

```
<?php wp_link_pages(); ?>
```

Page-links in Paragraph Tags

Displays page-links wrapped in paragraph tags.

```
<?php wp_link_pages('before=<p>&after=</p>&next_or_number=number&pagelink=page %'); ?>
```

Page-links in DIV

Displays page-links in DIV for CSS reference as `<div id="page-links">`.

```
<?php wp_link_pages('before=<div id="page-links">&after=</div>'); ?>
```

Parameters

before

(*string*) Text to put before all the links. Defaults to `<p>Pages :`.

after

(*string*) Text to put after all the links. Defaults to `</p>`.

`next_or_number`

(*string*) Indicates whether page numbers should be used. Valid values are:

- `number` (Default)
- `next` (Valid in WordPress 1.5 or after)

`nextpagelink`

(*string*) Text for link to next page. Defaults to `Next page`. (Valid in WordPress 1.5 or after)

`previouspagelink`

(*string*) Text for link to previous page. Defaults to `Previous page`. (Valid in WordPress 1.5 or after)

`pagelink`

(*string*) Format string for page numbers. `%` in the string will be replaced with the number, so `Page %` would generate "Page 1", "Page 2", etc. Defaults to `%`.

`more_file`

(*string*) Page the links should point to. Defaults to the current page.
